The results of your recent testing for COVID-19 was negative.

A negative test result means that the virus that causes COVID-19 was not found in your sample. For COVID-19, please note that a test result could be falsely negative if the sample was collected early in infection. You may test positive later if you are currently infected. It is important that you continue social distancing and wearing a mask when you are within six feet of any person and avoiding large gatherings of people.

If you develop any symptoms, please contact your provider.
